

Graphs of slope x aspect effects for Meron data

(a) Independence, N/S

(c) Independence, W/E

Estimated probability of tree dominance as a function of slope and aspect, when remaining covariates are set to their mean values. (a) Northern (solid line) and southern (dashed line) aspects; (c) western (solid line) and eastern (dashed line) aspects. Dotted lines give (nonsimultaneous) 95% confidence limits.
